

Multi Asset Managed Portfolios

What Is A Multi Asset Managed Portfolio?

An investment portfolio that invests across a range of asset classes (such as Australian shares, international shares, Australian and international bonds, listed property, infrastructure, alternative investments and cash), using a range of investment types (such as direct shares, ETFs and managed funds).

At Morningstar, our starting point is research - by having a comprehensive understanding of asset class valuations and investment fundamentals, we create portfolios that go beyond just a collection of individual investments.

The investments within our multi asset portfolios work together *holistically* to achieve a clear investment objective. Importantly, we actively manage the portfolios to meet client risk and return objectives throughout their investment time horizon. This provides your clients with a truly diversified investment solution that best preserves their savings and increases their wealth.

Better Investment Outcomes For Your Clients

Morningstar is unique as an investment manager - everything starts with our unparalleled access to investment data and research. We are able to use these data and research insights to build portfolios specifically made for the task at hand; helping your clients achieve their financial goals, whilst integrating seamlessly with your business.

Every portfolio is constructed from scratch, closely managed and focused on meeting its specific objective.

“We’ve delivered better investment outcomes for our investors, with our Managed Funds outperforming the majority of competitors over 1, 3, 5, 7 and 10 years with less risk¹. In-depth, unbiased research carried out by our well-resourced and highly experienced global analyst team means we can drill deeper into every single investment before deciding whether it has a place in our managed portfolios or not.”

Andrew Lill, Chief Investment Officer,
Morningstar Investment Management, Asia Pacific

Our suite of multi asset managed portfolios showcases this approach, giving you choice in terms of investment style, objective and implementation method (managed fund or managed account). Here, we outline this suite so you can decide which solution is the best fit for your business and your clients.

Integrating With Your Business

Our suite of multi asset managed portfolios provides a diversified investment solution that integrates seamlessly with your business.

We have managed portfolios for advisers wanting closer adherence to a traditional strategic asset allocation framework, as well as options for advisers and clients who are comfortable with a more flexible asset allocation approach (refer Diagram 1).

Morningstar Multi Asset Managed Portfolios

With a broad range of portfolios available in each series, you can choose the right portfolio based on your clients' financial goals.

	Real Return Managed Funds	Multi-Asset Managed Accounts	Diversified Managed Funds
For advisers...			
...with high net worth clients	✓	✓	✓
...looking for cost-effective solutions	✓	✓	✓
...with clients with lower account balances	✓	✗	✓
...with a more traditional asset allocation framework	✗	✗	✓
...with clients requiring annual or infrequent review cycles	✓	✗	✓
...with 'high-touch' clients requiring regular engagement	✓	✓	✓
...requiring the highest level of portfolio transparency	✗	✓	✗
...requiring a level of customisation	✗	✓	✗
...wanting to remove the need to issue SoAs/RoAs for portfolio changes	✓	✓	✓
...wanting to avoid the need to buy and sell individual stocks	✓	✓	✓

Achieving Your Clients' Financial Goals

We put investors first. At every step, we come back to this principle. Here's how:

Putting your client's investment objectives first:

Our goal is to help your clients achieve their financial goals by producing more consistent returns with less risk. By aiming to produce more consistent returns, your clients will be given the peace of mind they need in order to help them stay the course and reach their financial goals.

Capital Preservation: We think about risk the way you and your clients do. We define risk as losing money that can't be made back. Based on this definition of risk, we've designed an investment approach aligned to the needs of investors – with the aim of preserving their savings and growing their wealth.

Valuation driven: The foundation of our investment process involves the continuous analysis of asset class valuations using our Valuation Driven Asset Allocation framework. This means we establish which asset classes are undervalued and overvalued, relative to their 'fair value' (Refer Diagram 2).

In practical terms, we're seeking to invest in assets that are cheap or undervalued, as opposed to the expensive or overvalued ones. But it's not just about value. We want to be sure that the assets we hold are of good quality (Refer Diagram 3). We do this by undertaking comprehensive research to understand the fundamental drivers behind each investment. Our approach preserves your clients savings by avoiding over-valued assets, which typically results in more consistent returns with lower risk.

Diagram 2

Value = Greater Potential For Returns

The potential for return is greater and potential for loss is lower if an asset is cheap, or currently undervalued by the market. If you buy an asset that's expensive or overvalued, we see that as high risk, as you can see on the right hand side of this chart (above the VALUE line).

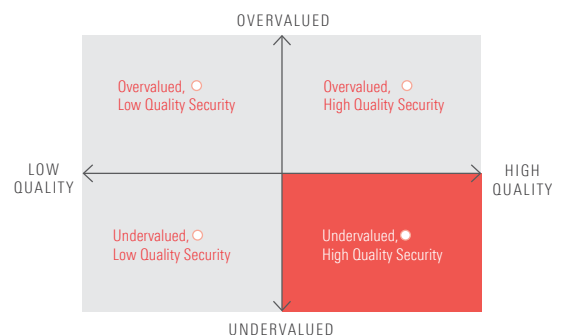

Diagram 3

Quality + Value = Greater Potential For Sustainable Returns

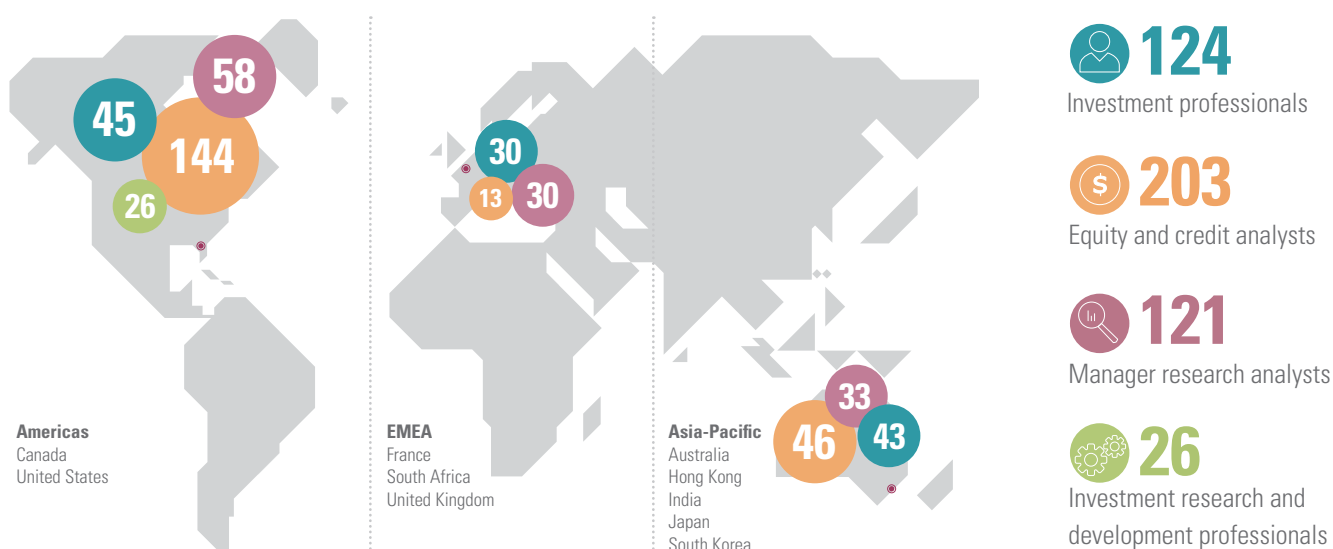

After we have scored a stock in terms of value, we then determine which are high-quality companies. As you can see in the chart below, securities can be high quality, but overvalued. To be held in our managed accounts, we're looking for securities with both a high Morningstar Quality and Value score, as shown by the red quadrant.

Expertise You And Your Clients Know And Trust

Over A\$260 billion¹
